

GKUC SITEOPS

Managing Director's complete user guide

Scenario-based instructions for every operating area

For the Managing Director account. This role can use all modules and approve all workflows.

Use this guide in the order a construction business works: set up the company, win and create a project, plan and purchase, run the site, pay people, settle finances, then review reports and controls.

Version: 17 September 2026. Screens and labels reflect the current GKUC SiteOps application.

00 How to use this guide

Each scenario starts with the navigation path, then the action, the information to enter, and the outcome to check.

Asterisk-marked fields on screen are required. Use Save, Create, Record, Submit or Issue only after reviewing the selected company and project.

Important

GKUC Construction and GKUC Readymix share people, materials and vehicles. Projects, quotations, BOQs, invoices and financial totals are company-specific. Check the Operating company selector before commercial or finance work.

One source

Enter a transaction in its source workflow once. For example, receive a client cheque in Cheques, issue stock in Materials or Stock locations, and enter a supplier invoice in Supplier invoices. Do not add a second manual Finance entry for the same event.

Contents

- 01 Getting in and navigating
- 02 Initial company and administration setup
- 03 New business and project creation
- 04 Running a project and coordinating sites
- 05 BOQs, quotations, tenders and QS control
- 06 Materials, purchasing and stock locations
- 07 Fleet and equipment
- 08 People and attendance
- 09 Payroll and performance
- 10 Finance, receivables and payables
- 11 Daily reports and analytics
- 12 Communication, files and governance
- 13 Operating checklists and troubleshooting
- 14 Report directory
- 15 Screen and feature map

01 Getting in and navigating

The top navigation exposes all modules. On a narrow screen, overflowed modules are in More. Browser back and direct page links work for main sections.

Sign in

GO TO Sign in page

1. Enter your company email address and password.
2. Select Sign in. The Dashboard opens after authentication.

ENTER / CHECK Use only your own account. In production, ask an administrator for a temporary password if you do not have one.

AFTER SAVING The top bar shows your initials, search, alert bell and sound control.

Find a section or switch company

GO TO Top navigation / More; Operating company selector

1. Choose a visible module, or open More for Stock locations, Fleet, Finance, Daily reports, Chat, Drive, Reports or Administration.
2. Where the Operating company control appears, choose GKUC Construction or GKUC Readymix before entering commercial data.
3. Return to Dashboard for the combined operational overview.

AFTER SAVING The active company name is displayed above company-scoped pages; shared staff, materials and vehicles remain available.

Find a document, alert or account setting

GO TO Top bar / Administration

1. Use Search inside documents to find stored files.
2. Open the bell for alerts and visit Administration > Notifications for the full queue.
3. Open your initials menu for account actions; use Administration > My account to change your password.

AFTER SAVING Unread alerts can be reviewed or marked read. Alert sound can be turned on or off independently.

02 Initial company and administration setup

Do these tasks before the first real quotation, invoice or payroll run. The MD may create other users and delegate access, but this guide assumes the MD performs the actions.

Set each company's legal and payment details

GO TO Administration > Company

1. Select the correct operating company.
2. Update its registered name, telephone, email, VAT rate, TIN, VAT registration, address and bank details.
3. Save, then switch company and repeat for the other entity.

AFTER SAVING Commercial documents use the company details belonging to the selected entity.

Set standard document wording and appearance

GO TO Administration > Documents; Administration > Designer

1. In Documents, review the standing quotation, BOQ and invoice terms and any extra footer line.
2. In Designer, adjust the document design and preview the result before saving.
3. Create a sample draft document and inspect the printable output.

AFTER SAVING Document-specific wording entered later can override the standing terms without changing every other document.

Add a user and manage access

GO TO Administration > Users; Administration > Access control

1. Select Add user, enter full name, email, temporary password of at least 10 characters, and role.
2. Use Access control to review or change role permissions and individual grants; deactivate an account in Users when access must stop.
3. Ask the person to sign in and change the temporary password.

DO NOT DUPLICATE Do not create two accounts for the same employee merely to grant access to two companies. Company resources are shared.

Maintain business dropdowns

GO TO Administration > Lists

1. Choose the list, such as expense types, payment methods or BOQ categories.
2. Add or edit a choice, then save and confirm that it appears in the relevant form.
3. Do not rename a locked system choice. Its exact value is used by business rules.

AFTER SAVING Configured options become available in forms without deploying new code.

Review alerts, audit and fraud signals

GO TO Administration > Notifications / Fraud watch / Audit log

1. Review unread alerts and use Run deadline scan to refresh deadlines and exceptions.
2. Use Fraud watch for flagged activity, then inspect Audit log for who changed a record and when.
3. Mark reviewed alerts read; resolve or dismiss fraud-watch findings only after checking evidence.

AFTER SAVING The bell count updates with the notification centre.

Preview the evening summary and messages

GO TO Administration > Evening summary / Messages

1. Read the evening message preview before sending.
2. Use Send it now only when a manual summary is needed; recipients require a WhatsApp number on their account.
3. Use Messages for direct operational communication.

DO NOT DUPLICATE Sending the summary or a message contacts people. Confirm the contents and recipients first.

03 New business and project creation

A project should be registered once, under the correct company. If it began as an inquiry, convert that inquiry instead of creating an unrelated second project.

Record and progress a customer inquiry

GO TO Projects > Inquiries

1. Select Log customer inquiry and enter customer, contact, phone, email, location, expected value, likely start, source and what the customer wants.
2. Save and update its stage as discussions continue: New, In discussion, Quoted, Won or Lost.
3. When won, use Register project on that inquiry.

AFTER SAVING The new project retains its relationship to the originating inquiry.

DO NOT DUPLICATE Do not also use Create project for the same won inquiry.

Create a project directly

GO TO Projects > Projects > Create project

1. Check the Operating company first.
2. Select Create project.
3. Enter Project name, Client, Project manager, Site location, Current stage, Opening budget, Start date and Target completion.
4. Save, then open the project card to review its detail page.

AFTER SAVING The new project becomes available to tasks, BOQs, purchases, attendance, stock, fleet, daily reports and company-scoped finance.

Review the complete project record

GO TO Projects > Projects > select a project

1. Use Command centre for health, budget, work queue and daily intelligence.
2. Open Activity & issues, Reports, Programme, Commercial, Subcontractors, Team, Gallery, Documents and Close-out for the respective workstream.
3. Use Back to projects when finished.

AFTER SAVING These tabs show linked records; most do not require a second copy of the underlying transaction.

Build the project programme and task plan

GO TO Project detail > Programme; Tasks

1. Add a milestone with title, due date and status; advance it as work progresses.
2. Create a task with title, project, assignee, deadline, priority and notes.
3. Review Task history, attach site photos/files, and move tasks through their statuses to completion and approval.

AFTER SAVING The project command centre and task productivity report reflect the new work.

Log a site issue or update

GO TO Project detail > Activity & issues > Add update or issue

1. Choose type, headline, details, category, status, priority, responsible person and follow-up date.
2. Save, then create a task if somebody must perform a specific follow-up action.
3. Use this for material delays, access problems, design changes and site decisions.

AFTER SAVING The issue appears in the project activity timeline; a task is separately assignable and trackable.

Assign project people, organize photos and close out

GO TO Project detail > Team / Gallery / Documents / Close-out

1. In Team, assign an employee and their role on the project.
2. In Gallery, upload evidence to the appropriate folder and add descriptions/checklists where available.
3. In Documents, review project files; use Close-out to inspect completion requirements before closing work.

DO NOT DUPLICATE Store photos and files against the project, not in unrelated chat messages only.

04 Running a project and coordinating sites

The Coordination module is the cross-project control desk. Use it to see resource availability before reassigning people, tools or vehicles.

See what is happening today

GO TO Coordination > Live sites

1. Review each active site, people on site, vehicles out and tools out.
2. Open a site to see its current assignment and schedule.
3. If a site is delayed, use Reschedule and enter new status, effective date, destination and reason.

AFTER SAVING The movement is recorded and affected people can be notified.

Find free resources for a chosen date

GO TO Coordination > Resource availability; People > Workforce map

1. Choose the date in the availability view.
2. Check free labour, vehicles, tools and site allocations; in Workforce map filter everyone, at sites, at office, free or on leave.
3. Open the person or resource before assigning it to confirm status.

DO NOT DUPLICATE Office employees can work at the office or a site; site workers should be shown at a site or unassigned, and leave must be respected.

Move a resource and inspect the trail

GO TO Coordination > Live sites / Movement history

1. Open the resource and select Move.
2. Choose the destination and give a reason, then save.
3. Open Movement history to verify the old and new assignment.

AFTER SAVING The cross-site move is visible to other operational modules.

Review prospective work

GO TO Coordination > Enquiries

1. Open an enquiry to read customer details and the history with that client.
2. Keep discussions and conversion decisions tied to the same enquiry record.

DO NOT DUPLICATE Use Projects > Inquiries to register a won enquiry as a project, rather than making a parallel record.

05 BOQs, quotations, tenders and QS control

The QS workflow establishes expected cost, client price, approved changes, actual cost and forecast. Set the correct company and project before building any commercial document.

Create or import a BOQ

GO TO Projects > BOQ & estimates > Create BOQ; Quantity Surveying > Bills of quantities

1. Create a BOQ for the project and enter its title, work lines, category, unit, quantity and rate.
2. Use the BOQ import action when a compatible prepared sheet is available; inspect imported items before approval.
3. Edit wording, notes and terms, open the printable bill, then approve when the estimate is agreed.

AFTER SAVING An approved BOQ becomes part of the project's budget basis and can price a quotation.

DO NOT DUPLICATE Do not re-enter the same BOQ as another package unless it truly represents separate work.

Price a client quotation

GO TO Quantity Surveying > Quotations > Create quotation from a BOQ

1. Choose the approved BOQ; confirm client, title, quotation date and valid-until date.
2. Set markup and VAT percentages, add notes, and build the quotation.
3. Review the client-ready document, edit wording if necessary, and mark the commercial outcome.

AFTER SAVING The quotation reuses BOQ items instead of requiring the same lines to be typed again.

Approve a scope or budget change

GO TO Projects > Variations

1. Record the variation against the right project and describe the changed scope and value.
2. Review whether it is pending, approved or rejected; approve only after authorization.
3. Check the project budget and QS cost forecast after approval.

AFTER SAVING Approved changes adjust the current approved budget; unapproved changes remain visible separately.

Record an actual daily cost against a BOQ item

GO TO Quantity Surveying > Cost control > Record daily project cost

1. Select project, date, cost category, description and the appropriate BOQ item when it was planned.
2. Enter actual quantity, unit and rate, or the total amount, with the receipt/invoice reference.
3. Classify the cost as Expected, Variation or Unexpected and save.

AFTER SAVING The one shared project cost ledger updates actual spend, item variance and finance reports.

DO NOT DUPLICATE If the cost was posted by stock issue, supplier/operating bill, petty cash or fleet, do not record it manually a second time.

Forecast an item overrun

GO TO Quantity Surveying > Cost control > select item > Update final-cost forecast

1. Compare the item's expected amount with actual to date.
2. Enter forecast final quantity, unit rate or amount and a reason for the change.
3. Review the forecast variance and unexpected/unallocated cost sections.

AFTER SAVING The project cost forecast and overrun reports show the exposure before the final invoice arrives.

Track a tender from discovery to outcome

GO TO Quantity Surveying > Tenders

1. Select Track tender and enter works, employer, contract number, bidding entity, procurement method, specialty and grade.
2. Set document sale dates, fee, bid deadline/time, validity, security, ceiling and estimate.
3. Use Bid, Documents required and Outcome tabs to update submission, opening and Won/Lost/Withdrawn status.

AFTER SAVING The tender record keeps deadline and decision history, including award value and awarded party.

Manage retentions and subcontractors

GO TO Quantity Surveying > Retention / Subcontractors

1. Record retention with project, amount, percent, held-from and release dates; release only the amount actually returned.
2. Add a subcontractor's company/individual identity, trade, contact, address and registration/NIC.
3. Record their quotation, agree a project-specific work-item rate and enter their bill when work is certified.

AFTER SAVING Agreed rates and bills remain linked to the project and feed commercial cost views.

DO NOT DUPLICATE Do not manually add a second expense for a subcontractor bill that already posts to the project ledger.

06 Materials, purchasing and stock locations

Materials covers the purchasing trail and stock transactions. Stock locations explains where quantities and returnable tools are now held.

Create the material and supplier masters

GO TO Materials > Stock / Suppliers

1. Use Add material for a unique material name, unit, stock type, store, opening stock, minimum level and unit cost.
2. Use Add supplier for company name, contact, phone, email and address.
3. Review existing records first to avoid duplicate names or assets.

AFTER SAVING The material becomes selectable on requests, orders and stock movements.

Request, approve and order stock

GO TO Materials > Purchase requests / Orders

1. Raise a purchase request for the project, needed-by date, items, quantities, expected rates and justification.
2. Collect supplier quotations on the request and compare amount, lead time and notes.
3. Create a purchase order with supplier, project, order date, quantities and agreed rates.

AFTER SAVING The order becomes a procurement commitment; it is not the same as a physical receipt or an invoice.

Receive an order and record a supplier invoice

GO TO Materials > Orders; Finance > Supplier invoices

1. Open the order, record each delivered quantity against its order line and confirm receipt.
2. Check that stock increased in Materials and Stock locations.
3. When the supplier invoice arrives, enter supplier, invoice number, amount, invoice date, due date and related order in Finance.

DO NOT DUPLICATE For stock items, the cost posts when stock is issued to a project; do not also make a manual project expense for the receipt.

Issue, return or adjust consumable stock

GO TO Materials > Stock > Record stock movement

1. Choose material, movement type, quantity and project/site where applicable.
2. Add the actual delivery/return reference and note, then save.
3. Confirm stock movement history and site position after saving.

AFTER SAVING An issue transfers material to the site and may post its project cost. A return restores quantity; review cost treatment before reporting the final project cost.

See stock by place, not just by total

GO TO Stock locations > Locations

1. Review storeroom and site positions, vehicle/equipment locations and quantity exceptions.
2. Use project and material filters to identify what is available and what has been issued.
3. If a count differs, record a physical site count with counter, condition and variance reason.

AFTER SAVING The location view separates store availability from quantities at work sites.

Hand over and return a tool

GO TO Stock locations > Tool handovers

1. Select Hand over a returnable tool, choose tool, site and quantity.
2. Record who took it, who handed it over, condition and handover reference.
3. On return, select the open loan and enter received-by, return reference and condition.

AFTER SAVING The open custody record closes and the tool's location changes.

DO NOT DUPLICATE Do not record the same handover again as a separate consumable stock issue.

Record site consumption and compare with BOQ

GO TO Stock locations > BOQ usage

1. Choose the material, project site, quantity used, date and completed work/notes.
2. Review actual usage against the quoted or BOQ allowance and inspect exception flags.
3. Investigate overuse with QS before ordering further material.

AFTER SAVING The site usage view shows whether material consumption is approaching or exceeding the estimate.

07 Fleet and equipment

Vehicles and equipment are shared resources. The asset record holds current assignment plus dated histories for drivers, odometer, fuel, service, repairs and renewals.

Add a vehicle and assign a driver

GO TO Fleet > Vehicles > Add asset; open asset > Change driver

1. Enter vehicle/equipment name, registration or asset ID, status, site, odometer, service interval and first renewal due date.
2. Open the asset, choose Change driver, select registered driver or enter a name, site, effective date and note.
3. Check Driver assignment history for the current and previous driver.

DO NOT DUPLICATE Do not overwrite historical assignments to represent a new driver. Use Change driver.

Record fuel, odometer and service work

GO TO Fleet > Vehicles > open asset

1. Use Odometer for a dated reading and source note.
2. Use Fuel for date, litres, cost, odometer and project if the fuel belongs to a site.
3. Use Service or repair for work type, date, odometer, cost, garage, project, status and work carried out; update Service schedule when intervals change.

AFTER SAVING The asset history updates. Project-charged fuel or maintenance can flow into project cost reporting.

DO NOT DUPLICATE Do not also record the same fleet charge as a manual Finance expense.

Manage insurance and revenue-licence renewals

GO TO Fleet > Compliance / Vehicles > open asset > Renewal

1. Review renewals due and overdue.
2. Record document type, reference/policy number, renewed-on, expiry and cost.
3. Confirm the new expiry appears in Compliance and the asset's Renewal history.

AFTER SAVING Deadline alerts can remind the team before the next expiry.

Manage registered equipment

GO TO Fleet > Equipment

1. Add equipment with asset code, name, category, purchase date, cost and notes.
2. Assign it to a project and responsible person with issue date, due-back date and condition.
3. On return, enter date, condition, destination/status and notes; log maintenance or repairs when needed.

AFTER SAVING The equipment record retains assignment and maintenance history, and a QR label can open the asset record.

DO NOT DUPLICATE Check Stock locations before also creating the same physical tool as a returnable stock item.

08 People, presence and attendance

Keep one employee profile per person. HR can add employees manually or discover them in a biometric import. Attendance and leave drive availability and may feed payroll.

Add an office employee or site worker

GO TO People > Employees > Add employee

1. Enter employee code, full name, department, designation/trade, employee type, contact details and join date.
2. Choose the paying company, pay basis and payment frequency; configure detailed compensation in Payroll settings.
3. Open the new employee profile and verify the personal and work details.

DO NOT DUPLICATE Search the employee register and biometric queue before creating a second record for the same person.

Review the whole employee profile

GO TO People > Employees > select a person

1. Read personal details, attendance trend across employment, leave/overtime, project assignments, tasks, work and performance.
2. Use employee documents for supporting files.
3. Return to Employees after checking the record.

AFTER SAVING This profile is the central record rather than a separate form for every activity.

Record attendance for somebody who went directly to site

GO TO People > Attendance > Record attendance

1. Choose person, work date, status and project/site, then check-in and check-out times where known.
2. Save. If an existing record is wrong, use Correct this record and enter a reason rather than making another attendance row.
3. Review the Attendance register and the person's profile.

AFTER SAVING One attendance record per employee per day is maintained, with correction history.

Import biometric scanner data

GO TO People > Biometric import

1. Upload the scanner report and inspect the preview of days, matched staff, unmatched people and rows needing review.
2. For each unfamiliar scanner identity, decide whether it is an existing employee, a duplicate identity or a genuinely new person.
3. Link or correct duplicates; create the person only if genuinely new; then commit reviewed attendance.

AFTER SAVING Future imports can recognize linked people without repeating the matching decision.

DO NOT DUPLICATE Do not bulk-create all unmatched names without checking duplicates and spelling variants.

Check who is working or free

GO TO People > Workforce map / Attendance register / Leave register

1. Select the desired day and filter everyone, at sites, at office, free or on leave.
2. Open individual records if assignment or attendance is unclear.
3. Use the view with Coordination > Resource availability before assigning people to another site.

AFTER SAVING Office and site workers, unassigned people and approved leave are distinguishable.

Record leave and overtime

GO TO People > Leave / Overtime

1. Record the employee, leave type, dates and reason; approve or reject after review.
2. Record overtime against the employee, date, project when applicable, hours and correct overtime type.
3. Approve overtime before running the relevant payroll period.

AFTER SAVING Approved leave affects availability and approved overtime can enter the salary calculation.

09 Payroll and performance

Payroll has effective-dated policy, employee-specific compensation, recurring components and draft runs. It supports daily, weekly and monthly pay arrangements.

Set the general payroll policy

GO TO People > Payroll settings > Add future policy

1. Choose an effective-from date.
2. Enter office, labour site/travel, driver and supervisor site/travel overtime rates.
3. Enter EPF employee, EPF employer and ETF employer rates and choose their calculation basis.

AFTER SAVING New runs use the applicable policy for their period. Historical runs retain their calculated breakdown.

Configure an individual salary

GO TO People > Payroll settings > Configure employee

1. Choose Salary paid by, pay basis, payment frequency and payroll category.
2. Enter effective-from date and the relevant monthly basic, weekly rate or daily rate.
3. Set EPF and ETF eligibility individually; add custom overtime rates only where an exception is required.

DO NOT DUPLICATE Do not assume all workers share EPF/ETF eligibility or a monthly salary.

Add benefits, allowances or deductions

GO TO People > Payroll settings > Add component

1. Choose the employee and component name.
2. Choose Allowance, Deduction or Reimbursement, enter amount per pay cycle, frequency and effective dates.
3. Review the employee's active components before a new payroll run.

AFTER SAVING The salary sheet shows recurring components separately from base pay and overtime.

Give and recover a worker salary advance

GO TO Finance > Petty cash > Salary advance; People > Payroll

1. Use the Salary advance float, record Spend, choose the actual employee and enter date, amount and reason.
2. Do not use the Office expenses or Fuel float for this payment.
3. After payroll is built, open the salary sheet and check the advance recovery schedule and deduction.

AFTER SAVING The advance remains employee-linked and is deducted according to the payroll calculation.

Run, inspect, approve and pay payroll

GO TO People > Payroll > Run payroll

1. Select period from/to and the employees to pay; build a draft run.
2. Open it and check basic earnings, attendance, approved overtime, recurring components, EPF/ETF, advances, employer cost and net pay.
3. Correct underlying attendance or settings if wrong; approve the run, then Mark paid only after payment.

DO NOT DUPLICATE Do not create multiple runs for the same people and same period to fix a source mistake.

Record a performance review

GO TO People > Performance > Add review

1. Choose employee and review period/date.
2. Score work quality, productivity, safety and reliability; enter strengths and improvement areas.
3. Save and inspect the review from Performance and the employee profile.

AFTER SAVING Management can compare performance with attendance and assigned work.

10 Finance, receivables and payables

Finance separates company ledgers while sharing the project and source records that created them. Check the selected company before every bill, invoice, cheque, bond or report.

Read financial performance

GO TO Finance > Financial reports / Budget monitoring

1. Choose all projects or one project and, where offered, a date range.
2. Read the narrative, KPIs, chart and supporting table together; export the visible table if needed.
3. Check Budget monitoring for approved budget, cost, income, payables and variance.

AFTER SAVING Project-specific and company-wide views can be compared without re-entering transactions.

Record and pay an electricity, water or other bill

GO TO Finance > Bills

1. Select Record an operating bill and enter bill type, provider, bill number, account, office/project allocation, period, bill and due dates.
2. Enter pre-VAT amount, VAT treatment/rate, reminder days and notes.
3. When actually paid, open the bill and Mark paid with date, method and payment reference.

AFTER SAVING Paid project bills post to project cost once and eligible VAT appears in the VAT ledger.

DO NOT DUPLICATE Do not also enter the same paid bill under Expenses.

Track a company credit card

GO TO Finance > Credit cards

1. Add the card name, bank, last four digits, cardholder, limit and default reminder lead time.
2. For each period, Record a card statement with dates, statement amount, minimum due and optional reminder override.
3. Record each payment with amount, date, method and reference; check remaining balance and reminders.

AFTER SAVING Upcoming card deadlines remain visible until paid.

Raise, issue and collect a client certificate

GO TO Finance > Client invoices

1. Select Raise a certificate and choose the project, type, title, dates, tax treatment, retention and deductions.
2. Enter work lines, quantities and rates; review gross, VAT and net payable before saving draft.
3. Use Issue when approved. For cash, card or bank transfer, use Record payment on that invoice.

AFTER SAVING The invoice's outstanding balance and ageing update; a direct receipt posts income once.

DO NOT DUPLICATE For a cheque, use Cheques > Receive a client cheque and link the invoice, not Record payment.

Receive and clear a client cheque

GO TO Finance > Cheques > Received

1. Select Receive a client cheque; enter project, invoice if applicable, cheque number, drawer bank, payer, amount and dates.
2. Record deposit-by date, reminder lead time, purpose and notes.
3. Update status when deposited, then Cleared only when the bank confirms it; record a return if dishonoured.

AFTER SAVING Clearance posts the linked invoice receipt and income once; a cheque merely held is not cash received.

Issue and clear a supplier cheque

GO TO Finance > Cheques > Issued

1. Select Issue a future cheque; link supplier and invoice, then enter cheque number, bank/account, payee, amount, issue and cheque dates.
2. Set reminder days, purpose and notes; review the follow-up queue.
3. Confirm Cleared only after bank confirmation, or mark Returned/Cancelled/Replaced as appropriate.

AFTER SAVING A cleared linked cheque settles the supplier invoice once.

DO NOT DUPLICATE Do not also record a direct Cheque payment on the supplier invoice.

Record and extend a bank bond

GO TO Finance > Bonds

1. Record bond type, beneficiary, bank, project if applicable, bond number, amount, margin, commission, issue/expiry dates and reminder days.
2. Review approaching expiry in Bonds and Notifications.
3. Use Extend for a later expiry, extension date, reminder setting and additional commission; update status when released, called or expired.

AFTER SAVING The bond history and risk reports retain live exposure and extensions.

Operate three separate petty-cash accounts

GO TO Finance > Petty cash

1. Open independent floats for Office expenses, Salary advance and Fuel, each with its own holder, ceiling and low-balance threshold.
2. Top up each float separately. For Spend, choose the appropriate float, date, description and project/employee where relevant.
3. Review movement history and balance after each entry.

AFTER SAVING Project-linked office/fuel spending can feed project costs; employee-linked salary advances feed payroll.

DO NOT DUPLICATE Do not treat the three float balances as one pool or re-enter a petty-cash Spend under Expenses.

Record an exceptional expense or non-invoice income

GO TO Finance > Expenses / Income

1. Use these manual forms only when no linked source workflow already owns the transaction.
2. For an expense, enter project, cost type, category, total amount, date, reference and description.
3. For income, enter project, amount, received date, non-cheque method, reference and description.

AFTER SAVING The shared ledgers update project and company reporting; exact repeated manual entries are blocked.

DO NOT DUPLICATE Use Bills, Supplier invoices, Client invoices, Cheques, Materials, Fleet, QS or Petty cash when one of those is the true source.

Enter and settle a supplier invoice

GO TO Finance > Supplier invoices

1. Choose supplier, related purchase order when available, invoice number, amount, invoice date and due date.
2. Review the payable and only use direct Record payment for cash, card or bank transfer.
3. For cheque settlement, create an Issued cheque linked to this invoice and confirm clearance later.

AFTER SAVING The payable decreases when payment is confirmed. Paid eligible supplier invoices appear in the VAT ledger.

Check VAT and expense categories

GO TO Finance > VAT ledger / Categories

1. Review output VAT from paid client invoices and input VAT from paid supplier invoices and operating bills.
2. Check the net VAT figure against the detailed lines; this is a reporting aid, not a filing submission.
3. Use Categories to add an expense category used for manual cost classification.

DO NOT DUPLICATE Do not enter paid invoices again solely to make VAT appear; correct the source invoice and status.

11 Daily reports and analytics

Site reports give a narrative of work done and explain delays. Project, Finance and system-wide reports turn source records into visual and tabular views.

Submit the daily site report

GO TO Daily reports > New daily site report

1. Choose project/site and report date; enter workforce on site, weather and delay hours.
2. Describe work completed and any delays or issues; add material and equipment usage lines and site photos.
3. Submit, then open the saved report to check its detail and evidence.

AFTER SAVING Project Daily intelligence, delay/weather reports and related dashboards update.

DO NOT DUPLICATE The daily narrative is not a replacement for stock movement, attendance or payable records.

Open a project's report library

GO TO Project detail > Reports

1. Use search to find a report type and select it.
2. Read the management narrative, measures, chart and supporting schedule.
3. Export the table when you need a dated working copy.

AFTER SAVING Twenty project report types cover commercial, delivery, labour, material, equipment and document control.

Open company or project financial reports

GO TO Finance > Financial reports

1. Choose the operating company, all projects or one project, then optional from/to dates.
2. Select one of the twenty report types from the left rail or search it by name.
3. Read both charts and detailed records; use Export table for the current view.

AFTER SAVING The scope displayed at the top tells you which company's data is included.

Generate a system-wide operational report

GO TO Reports

1. Choose Projects, Budget, Profit, Daily progress, Attendance, Employees, Tasks, Materials, Purchases, Vehicles or Equipment.
2. Set From and To dates and select Apply range.
3. Review the generated table and use Export CSV if a spreadsheet copy is needed.

AFTER SAVING The exported CSV matches the report and date range on screen.

12 Communication, files and governance

Use the built-in communication and file tools for project context and traceability, while keeping formal transactions in their own modules.

Chat with a colleague or group

GO TO Chat

1. Choose a person or create a group, then type and send a message.
2. Use the conversation list to return to earlier discussions.
3. For a formal task or site issue, also record it in Tasks or Project activity.

DO NOT DUPLICATE A chat instruction alone does not create a task, expense, material issue or approved change.

Store, share and retrieve files

GO TO Drive; top-bar document search; record attachments

1. In Drive, navigate folders and upload a document to the correct place.
2. Create a share link only for intended recipients and switch it off when access is no longer needed.
3. For a file that proves a project, employee, invoice or equipment event, attach it to that record too.

AFTER SAVING Document search can find indexed files; the source record retains its own evidence.

Review accountability

GO TO Administration > Audit log / Fraud watch; top-bar bell

1. Inspect the audit trail when a value, status or assignment looks wrong.
2. Compare any fraud-watch flag with source documents and the associated record.
3. Work through deadline alerts daily and mark only resolved items read.

AFTER SAVING Decisions, corrections and exceptions remain reviewable by the MD.

13 Operating checklists and troubleshooting

Use these compact routines to keep source records aligned and avoid double entry.

At the start of a new project

- Set the Operating company; convert a won inquiry or create the project once.
- Confirm manager, client, site, dates and opening budget; open the project detail page.
- Create milestones and tasks; assign people; record the initial BOQ and commercial terms.
- Open the gallery/documents and ensure a place exists for plans, approvals and site photographs.

Each working day

- Check Dashboard, Coordination, Workforce map, open tasks, project issues and deadline alerts.
- Record real attendance and correct site-direct arrivals; reconcile the biometric import queue.
- Receive/issue stock and record fleet movements at their source; submit site reports with evidence.
- Update QS actual cost and forecasts only for costs not already posted by source transactions.

Each finance and payroll cycle

- Review outstanding client and supplier invoices, cheque follow-ups, bill/card due dates and bonds.
- Confirm cash/cheque clearance before marking payments; inspect VAT source lines.
- Validate attendance, overtime, compensation and advances before payroll; inspect draft salary sheets before approval.
- Compare project and company reports and investigate exceptional variances or repeated-looking references.

If a save fails

Check required fields, the selected company/project, duplicate reference, date order, remaining balance and your current screen. Re-open the record before trying again: a successful prior save may already have been recorded.

If figures differ

Trace back to the source: invoice for receivables, bill or supplier invoice for payables, stock issue or QS entry for project cost, cheque status for cleared money, payroll draft for salary. Do not add a balancing manual entry just to make two screens agree.

Data caveat

Some older ledger rows may have similar amounts and references without a source link. Treat them as review candidates, not automatically proven duplicates. Reconcile them against receipts, invoices and bank evidence before any correction.

14 Report directory

The following names match the current report selectors. Empty charts or tables mean the source workflow has no qualifying records for that project, company or date range.

Project detail > Reports (21 types)

01 Executive project summary	12 Labour and attendance
02 Profit and loss	13 Daily site operations
03 Budget versus actual	14 Delay and disruption
04 Project cash flow	15 Weather impact
05 Cost category analysis	16 BOQ item cost variance
06 Revenue and certification	17 Unexpected and additional costs
07 Client receivables and ageing	18 Material consumption
08 Procurement commitments	19 Equipment deployment
09 Supplier payables	20 Project workforce allocation
10 Programme progress	21 Document control
11 Task productivity	

Finance > Financial reports (20 types)

01 Executive financial summary	11 Payroll and labour cost
02 Profit and loss statement	12 Petty cash movement
03 Project profitability comparison	13 Retention exposure and releases
04 Budget versus actual cost	14 VAT and invoice deductions
05 Cash flow movement	15 Bank bonds and guarantees
06 Revenue and income analysis	16 Cost forecast and overrun
07 Expense analysis by category	17 Unexpected and unallocated costs
08 Accounts receivable and ageing	18 Variation financial impact
09 Accounts payable and ageing	19 Payment method analysis
10 Procurement commitments	20 Monthly financial trend

15 Screen and feature map

Use this as a final cross-check when looking for a feature. The listed tab labels are the current on-screen names. A module may also have detail pages and forms described in the scenarios above.

SECTION	WHAT IS INSIDE
Dashboard	Overview, status, alerts and quick links
Coordination	Live sites; Resource availability; Enquiries; Movement history
Projects	Projects; Milestones; BOQ & estimates; Variations; Inquiries. Project detail: Command centre; Activity & issues; Reports; Programme; Commercial; Subcontractors; Team; Gallery; Documents; Close-out
Tasks	Create, assign, follow up, approve, view history and attach files
Quantity Surveying	Cost control; Quotations; Bills of quantities; Tenders; Retention; Subcontractors
People	Employees; Workforce map; Attendance; Attendance register; Biometric import; Leave; Leave register; Overtime; Payroll; Payroll settings; Performance; Departments
Materials	Stock; Movements; Purchase requests; Orders; Suppliers
Stock locations	Locations; Tool handovers; BOQ usage
Fleet	Vehicles; Compliance; Fuel & service; Equipment
Finance	Financial reports; Budget monitoring; Bills; Credit cards; VAT ledger; Client invoices; Cheques; Bonds; Petty cash; Expenses; Income; Supplier invoices; Categories
Daily reports	Create and review dated site reports with materials, equipment and photos
Chat / Drive	Direct/group chat; folders; file uploads and share links
Reports	Projects; Budget; Profit; Daily progress; Attendance; Employees; Tasks; Materials; Purchases; Vehicles; Equipment
Administration	Users; Access control; Company; Documents; Designer; Notifications; Evening summary; Messages; Lists; Fraud watch; Audit log; My account

End of guide

The next best step for a new MD is to practise one full project cycle in a test company: create a project, approve a BOQ, order and issue material, submit a daily report, invoice the client, record payment, run payroll and review the reports. Confirm each action appears once in its downstream views.
